1.0 PRODUCT DESCRIPTION

1.1 PRODUCT OVERVIEW

RAIDDrive II is designed to break the throughput bottleneck in the storage subsystem by removing the bandwidth limitation of the SATA bus. The PCIe (Gen.2) x8 interface used by RAIDDrive II supports 4GB/sec bandwidth, more than 13 times that of the SATA-II 3Gbps bus, and 6 times greater than the SATA-III bus.

Using the latest NAND flash memory and up-to-date RAID controller, RAIDDrive II is able to support Max. READ speed of up to 2.6GB/sec. A turbocharged cache system with up to 1GB of DRAM cache enables Max. Write speeds as fast as 3.2GB/sec. RAIDDrive II, which houses eight discrete SATA SSDs, comes in a custom formfactor measuring 231.5 x 94 x 20.6 mm.

This small formfactor now can be fitted into the 1U/2U/3U storage server with the RISER card, which is one of the great advantages over the previous generation RAIDDrive GS.

5.3.6 IO METER

IO Meter tests the RAIDDrive's transaction speed in I/O operations per second. We ran this test with queue depth settings of 1 ~ 64. The larger queue depth tended to offer the highest transaction speeds. We specially ran this program for 50 minutes per each thread at the Steady State SSD status.
